

Hibernate & Spring Data JPA

Beginner to Guru

Create User and Schema

Create MySQL User and DB Schema

- Recap of Best Practices
 - Use Service Account with minimal access
 - Use Schema aka database for application
 - Common to have service account to maintain schema
 - Will come into play later for schema migrations
- DDL for creating users and permissions is typically platform specific
 - Commands shown are for MySQL version 8 or higher

MySQL Commands

- Usernames in MySQL are username @ IP address
 - This is to limit access to specific addresses
 - % is a wildcard saying any IP address
- Database to create - bookdb
- Users to create bookadmin and bookuser (Application service account)
